

Shock Therapy 15-07-2015 :

I've been using the DO Engineering oil filling machine for almost 5 years now, still working as perfect as it was the day I bought it.

I have worked in the suspension industry for around 40 years now, filling shock absorbers by hand, and as soon as I came across this oil filling machine I knew how much improvement it could give.

Sure it is a pretty big investment, but it really pays off with huge time savings, clean working and air free bleeding of my shock absorbers. The quality of the DO Engineering oil filling machine is very high and the filling quality is exceptional. I've tested this machine against my very best hand bleeding and was quite shocked by the difference I was able to notice on track. The shock absorbers perform much better and especially the difference in damper fading under high temperature is quite dramatic.

Now I can provide the very best settings for my customers as I can be sure that everything I change in the settings will give the results I'm looking for. I no longer have to wonder if the difference is caused by air that is left when bleeding by hand.

Like mentioned before; of course it is a pretty big investment, but the only real way to go if you want to get the best quality, consistency and time savings on filling shock absorbers. I use my DO Engineering oil filling machine multiple times a day and I can honestly say with the quality of the machine and service, it is money well spend!
