

GRP - Rockstar Energy Suzuki World MX1 17-06-2011 :

Although it's been only a month since we started using the DO Engineering Shock Filling Machine , it's already become an indispensable piece of machinery in our workshop.

A hassle-free set-up combined with it's compact build and ease of setting up new or serviced shocks are items that are first noticed. But it's true benefit is actually the time that can be gained while using this machine, definitely when compared with the traditional (messy) way of filling a shock. Additionally it's accuracy and the fact that a finished shock is 100% air free is of utmost importance to us. As the Rockstar Energy Suzuki Factory Racing team we build the best bikes possible for our riders, and we have to be able to give our riders their preferred shock and shock setting at all times, and we feel that we have found the right equipment to do so!
